"Agency heads are scared to death of how the patient population will react if XMRV works out." - Suzanne Vernon, September 11th, Lobby of the Salt Lake City Downtown Hilton – During a break at the 2010 OFFER Utah Patient Education Conference

I've been struggling with what I ought to do with this for almost six months. Suzanne Vernon said this during a conversation she was having with me and Cort. She just sort of interjected it. No real need nor was there much of a segue. She said that it should not be repeated. Yet I wondered why I earth she would say something like that to someone she had just met.

Why? Because in 1992 ONE million Americans were Infected with HIV
In 2010 studies showed between 10-25 Million Americans were infected with XMRVs

“One of the most widely distributed biological products that frequently involved mice or mouse tissue, at least up to recent years, are vaccines, especially vaccines against viruses . . .

It is possible that XMRV particles were present in virus stocks cultured in mice or mouse cells for vaccine production, and that the virus was transferred to the human population by vaccination

Martin Luther King : following freedom March from Selma to Montgomery, Alabama

"I know you are asking today, 'How long will it take?' ...

"I come to say to you this afternoon, however difficult the moment, however frustrating the hour, it will not be long, because truth crushed to earth will rise again.

"How long? Not long, because no lie can live forever.

"How long? Not long, because you shall reap what you sow.

"How long? Not long, because the arc of the moral universe is long, but it bends toward justice."
